AHMAD ASYRAF BIN MOHAMAD ZAID

Software Developer | Modern React, SPFx & Enterprise Systems

+6011-10369536 • asy.zaid98@gmail.com • Bukit Jalil, Kuala Lumpur • LinkedIn • Portfolio

PROFESSIONAL SUMMARY

Enterprise Software Developer with 4 years of production experience delivering secure, high-availability web platforms, custom portal integrations, and modern intranet solutions. Highly proficient in SharePoint Framework (SPFx), SharePoint Online / 2016 customization, React, TypeScript/JavaScript (ES6+), C#/.NET RESTful APIs, and automated Power Platform workflows. Proven track record translating complex departmental Change Requests (CRs) into auditable UI workflows, engineering custom web parts, configuring secure document libraries, and enforcing role-based permissions. An analytical engineer adept at eliminating system performance bottlenecks, maintaining compliance audit logs, and integrating client applications with enterprise databases.

CORE TECHNICAL COMPETENCIES

- **SharePoint & Microsoft 365:** SharePoint Online, SharePoint 2013/2016, SharePoint Framework (SPFx), Custom Web Parts, Application Customizers, Power Automate, Power Apps, Power Pages, Microsoft Graph API
- **Web & Frontend Architecture:** React.js, TypeScript, JavaScript (ES6+), Vue.js, HTML5, CSS3, DOM Manipulation, Ant Design, Tailwind CSS, Storybook, Vite, Webpack
- **Backend & Systems Integration:** C#, .NET Framework, ASP.NET Web APIs, RESTful Web Services, JSON, XML, AJAX, Node.js, Express.js, MSSQL Server / MySQL fundamentals, MongoDB
- **Enterprise Governance & Security:** Role-Based Access Control (RBAC), Permission Inheritance, Audit Log Tracking, Client-Side Schema Validation, Compliance Controls, Business Process Automation
- **DevOps, Cloud & Quality Assurance:** Docker Containerization, CI/CD Pipelines, AWS (EC2), Cypress (E2E Automated Testing), Git Version Control, Agile/Scrum Methodologies
- **UI/UX & Analysis:** User Requirements Gathering, Change Request (CR) Implementation, Technical Documentation, Wireframing & Prototyping (Figma), Cross-Device Accessibility Standards

PROFESSIONAL EXPERIENCE

Software Developer | **MYEG SERVICES BERHAD, Petaling Jaya** *Dec 2024 – Present*

- **Accelerated enterprise portal feature delivery cycles** by designing, documenting, and maintaining centralized, reusable UI component libraries using React, Ant Design, and Storybook across distributed governance platforms.
- **Decreased initial bundle size and application page latency** across high-stakes governance dashboards by implementing dynamic route-based code-splitting, asset lazy-loading, and optimized DOM rendering.
- **Prevented critical regulatory submission errors and data corruption** by engineering robust client-side schema validation layers integrated with backend RESTful services and structured JSON payloads.
- **Executed complex business Change Requests (CRs) ahead of schedule** while guaranteeing strict cross-platform responsiveness and full compliance with HTML5/CSS3 accessibility standards.
- **Safeguarded enterprise data governance and audit integrity** by integrating user activity audit log tracking and role-based interface views for sensitive public-sector data submissions.
- **Streamlined cross-functional engineering handoffs** by collaborating with UI/UX designers and backend leads to validate technical feasibility, establish interface contracts, and enforce deterministic design tokens.

Software Developer | **FLUXER TECHNOLOGY SDN. BHD., Kuala Lumpur** *Nov 2023 – Nov 2024*

- **Customized enterprise SharePoint Online portals and client collaboration sites,** developing modern SPFx web parts using React and TypeScript to streamline document sharing and internal record retrieval for corporate financial clients.
- **Automated cross-departmental approval workflows and form routing** by creating automated Power Automate cloud flows integrated with SharePoint lists and Microsoft 365 services, cutting manual processing turnaround by 40%.
- **Integrated client-side platforms with enterprise C# / .NET RESTful APIs,** optimizing JSON payload serialization and asynchronous state handling to support high-frequency financial record retrieval and database synchronizations.
- **Boosted mobile user task-completion rates on high-volume web platforms** by delivering touch-optimized, high-performance interfaces built with React.js and Vue.js frameworks.
- **Streamlined deployment cadence and eliminated environment discrepancies** by establishing automated CI/CD workflows and containerized build pipelines utilizing Docker.
- **Enforced SharePoint security and governance compliance** by configuring role-based permissions, custom security groups, and audit log monitoring across financial client document libraries.
- **Resolved complex operational Change Requests (CRs) and usability friction points** by partnering with business stakeholders to refine operational workflows and implement responsive UI components.

Junior Software Engineer | **BALANCE SOLUTION SDN. BHD., Kuala Lumpur** *Jan 2023 – Nov 2023*

- **Configured and maintained on-premise SharePoint 2016 and intranet team sites,** creating custom document libraries, metadata lists, and site pages to support client document management and collaboration needs.
- **Implemented custom site customizations and automated notification triggers** using SharePoint Designer workflows, HTML5, CSS3, JavaScript, and REST API queries against backend MSSQL databases.
- **Supported first-line SharePoint administration and troubleshooting,** monitoring system permissions, user access requests, and resolving site configuration issues within defined SLA targets.
- **Reduced application load latency by 15% and cut post-deployment regression bugs** by implementing automated Cypress end-to-end testing suites and conducting comprehensive frontend asset optimization.
- **Configured, deployed, and maintained client-server infrastructure on AWS EC2,** optimizing server configuration, traffic distribution, and improving overall system operational reliability by 50%.
- **Authored standardized technical documentation and user guides** for SharePoint site administrators and end-users, facilitating smooth system adoption and reducing recurring support tickets.

EDUCATION & TECHNICAL QUALIFICATIONS

Software Engineering Full Reskilling Programme | **AirAsia Academy, Malaysia** *Completed Sep 2022*

- Accredited Software Engineering Certification: Intensive industry curriculum covering Object-Oriented Programming (OOP), C# and full-stack software development principles, RESTful architecture, relational database management (MSSQL/MySQL), version control, and cloud workflows.

Bachelor of Biomedical Science (Hons.) | **Universiti Sultan Zainal Abidin (UniSZA)** *2017 – 2022*

- Academic Standing: GPA 3.45 / 4.00. Developed rigorous systematic analysis, statistical data modeling, and root-cause diagnostic capabilities, directly applied to deterministic software bug prevention, code refactoring, and structured UI/UX architecture.

CERTIFICATIONS & CONTINUOUS UPSKILLING

- **Getting Started with Google Kubernetes Engine (GKE)** — Awantec (Nov 2025)
- **Programming Languages (Python)** — Skillsture (Nov 2022)
- **SharePoint Framework (SPFx) & Microsoft 365 Enterprise Solutions** — Practical Application & Development (Active)
- **Power Automate & Enterprise Process Automation** — Practical Application & Development (Active)
